When You Need to Bypass Activation Lock?

There are several situations in our daily life that can lead to an activation lock, such as buying a second-hand iPhone, forgetting an Apple ID password, etc. iMyFone iBypasser can help you bypass iCloud activation lock without password. The need to bypass iCloud activation is usually minimal as one is always aware of their iCloud account details. But if your device is misplaced or accidentally taken by someone (usually stolen), bypassing the iCloud activation is the only viable solution that one with good intentions can afford to find necessary details about the device's owner.

iCloud accounts, even though not easily hacked, can still be hacked by skilled hackers or simply by people who are aware of your account details. If one tries to get into their hacked (or) tampered account by regular attempts, the iPhone could reset itself and result in a total loss of data which is something no owner wants to happen.

So, as for the iCloud locked problem, we will share with you some methods on how to bypass iCloud activation on iPhone. We hope these iCloud removal methods can solve your iCloud-locked problem. One amazing element of their security is iCloud Activation Lock. What it does is, when you own and set up an iPhone, it gets connected to a unique Cloud ID.

That gives only you the privilege to be in control of your data. Even if your iPhone gets stolen, the thieves wouldn't be able to use it because it'll have your activation lock associated with it. They'd need the combination of username and password of your Apple ID to access it.

The iCloud Activation Lock works hand in hand with "Find My iPhone", which is another security feature that allows you to locate your missing device. Both of these features come enabled by default on all iPhones and should be kept that way. While the iCloud Activation Lock feature is definitely necessary and does a brilliant job, there may be a situation in which you might feel a little helpless. One such example is when you buy a second-hand/used iPhone and don't realize that it was locked.

In such a situation, you can make use of the below-mentioned tools that'll help you remove iCloud Activation Lock seamlessly.

Whilst you hold the iPhone of a completely unknown entity and wish to return the same to its rightful owner and require appropriate details about the owner, this can be achieved briefly by applying the following method.

In the activation window, press the home button and then select Wi-Fi settings and then tap on the 'I' bonded by a circle. Now it's time to remove the existing DNS server and put a custom one in motion. Now, let's follow the steps below to bypass iCloud activation on iPhone.

How to bypass iCloud activation lock

Enter the new DNS server as 78.109.17.60.

Tap on "Back" > "Done" > "Activation help."

Once you accomplish the above-mentioned easy steps, a message would appear saying you have successfully connected to my server.

Tap on the "Menu" on the top right.

Scroll through several applications available for use such as YouTube, Mail, Maps, Games, Social, User chat, Video, Audio, and more.

Select the appropriate application which you think can provide the information you require for the owner of the phone.

A fast and safe tool to unlock locked iCloud

While talking about a suitable tool to bypass iCloud activation, missing out on Dr.Fone - Screen Unlock (iOS) doesn't make any sense as it is the most trusted and loved tool by millions of users. Available for Windows and Mac operating systems, it offers an extremely easy process to make the work of bypassing iCloud done. Many other tools don't hesitate to make false promises, but Wondershare has always managed to upkeep the security and trust of the users and does what it says.
